

TOP USE CASES FOR AI IN HEALTHCARE

Individual ad hoc use

Using tools like ChatGPT, PerplexityAl, and others to support everyday tasks

- Marketing materials creation
- Job description drafting
- Research conduction
- Educational material preparation (especially for complex topics)
- Voice-to-text for notetaking

Middle/back office

Automating back or middle office work to reduce rote workload

- · Financial close processes
- Data consolidation, clean-up
- Aggregation of member data (e.g. to support call center operations)

Member Experience

Creating non-clinical tools / automations that enhance the member experience

- Chatbots for members to find information or navigate themselves
- Call center augmentation

 surfacing all data
 relevant to an individual
 to enable an agent to
 have a personalized and
 informed interaction

Care provider enablement

Recommending actions for humans to evaluate and act upon

- Next best action recommendations fed to a Care Management team
- Remote patient monitoring
- Point of care prompts (e.g. in CM platforms, Epic)

Clinical/medical

Executing actions that directly impact members or access to care

- Utilization management denials / approvals automation
- Implantable devices
- Hospital / clinical environment data applications (e.g. sepsis monitoring)

CONSCIOUS BUYING & DEPLOYMENT

Ensure specialized staff can understand why Transparency & explainability recommendations are being made Assess what methodologies are in place to control for Bias mitigation methods systemic disparities (e.g. proportionality analysis) Understand healthcare experience, outcomes, model Vendor due diligence performance, & compliance with HIPAA, TCPA, etc. Ensure solutions embed into processes in workflows, Operational integration rather than create new silos Validate processes that are in place to mitigate model Continuous testing & refinement drift over time

HOW TO MAKE DATA EXPLAINABLE AND ACTIONABLE

Our models identify who is impactable, why they need help, and how to reach them

\$5,000 \$4,500 \$4,000 \$3,500 Avg Cost Increase (PMPM) \$3,000 \$2,500 \$2,000 \$1,500 \$1,000 \$500

\$0

New Female Members with Low Access to Technology and Transportation

Males Expected to See a First-Time Obesity Diagnosis Over the Coming Months

Males with Mental Health Conditions and No Recent Preventive Care Visits

Food Insecure Males with Mental Health Challenges

89 members in current file, with an average cost of \$2,583 since joining.

Care Costs Increase:

\$19.7

\$2.6

Eligibility: New members.

More likely to live in zip codes with low tech adoption

Example Cohort: New Female Members with Low Access to Technology and Transportation

This cohort of 89 patients is more likely to live in older multi-unit housing near high traffic but low public transit corridors, with a higher percentage of shift workers and limited access to grocery stores offering fresh produce. Recent clinical records describe length of commute to their appointments and include elevated fasting glucose, borderline hypertension, and multiple mentions of back pain.

2.39x

More likely to have at least 1 inpatient visits over the next 12 months

Their expected trend will likely lead to a near-term 2.5x to 3.6x rise in medical costs.

Outlook

78.6%

Expected to be diagnosed with Type 2 diabetes (E11) for the first time over next year

\$19.7K

Expected future cost over next year, likely to range between \$11.4K and \$28.0K.

Predicted Comorbidity Count

Key Statistics

GETTING STARTED

Start soon, start small, expand deliberately

Identify big (low risk) problems first

Convene a multidisciplinary team Keep humans in the loop

Build a roadmap early

Potential areas to begin:

- → *Member engagement* use Al prompts to personalize and enrich conversations.
- → Retention & product awareness surface right-fit programs (care management, wellness, benefits navigation) to the right members at the right time.
- → *Population engagement* prioritize harder-to-reach lines of business where member needs are <u>higher</u> and retention/growth is critical.
- → Resource-to-member matching align available supports and services with the members most likely to benefit, producing near-term ROI.
